WORK EXPERIENCE

Tutor

June 2023 – Present

- Taught 30+ high school students in Calculus, Advanced Functions, and Computer Science, which increased average student grades by 15–20% over the course of a semester
- Conducted 5–7 tutoring sessions per week, focusing on problem-solving techniques and code comprehension
- Designed custom practice problems to reinforce learning, receiving positive feedback and referrals from students and parents

VP Events

May 2026 – Present

McMaster Society for Engineering Research

Hamilton, ON

- Led the end-to-end planning, strategy, and execution of academic and technical events, connecting undergraduate engineering students with faculty researchers and industry professionals.
- Managed event logistics, budgeting, venue booking, and speaker schedules for large-scale research showcases, panel discussions, and workshops.

Administrator

May 2026– Present

Engineers Without Borders

Hamilton, ON

- Coordinate administrative operations including executive meetings, events, room bookings, AV/technology, calendars, and internal communications.
- Manage meeting logistics by scheduling recurring and one-off meetings, preparing agendas, recording minutes, and tracking action items to ensure timely follow-up.
- Develop and maintain centralized action-item trackers, shared calendars, team documentation, and organize digital files to improve executive team accountability and efficiency.

PROJECTS

Robotic End Effector System | Python, Autodesk Inventor, PrusaSlicer

- Developed Q-Arm robotic control scripts in Python to execute precise pick-and-place trajectories and smooth handling paths.
- Programmed data-matching algorithms mapping barcode scans to an inventory database with robust console error-handling.
- Authored a secure user authentication system utilizing data encryption logic to protect credentials within a dynamic database.
- Engineered data pipelines converting barcode inputs into multi-dimensional arrays for automated shipment tracking.

Personal Portfolio | HTML, CSS, JavaScript

- Designed and developed a responsive personal portfolio website using HTML, CSS, and JavaScript.
- Optimized asset delivery and minified code to achieve fast page load speeds and high-performance scores.
- Engineered data pipelines converting barcode inputs into multi-dimensional arrays for automated shipment tracking.

EDUCATION

Software Engineering

2025-Present

McMaster University

GPA: 3.9

Relevant Courses: Integrated Cornerstone Design, Object-Oriented Programming, Computer Architecture

SKILLS & CERTIFICATIONS

Languages | Python, JavaScript, HTML, CSS

Certifications | WHMIS 2015, Standard First Aid and CPR-C
